Strategy : Edge Cases

Fundamentals of the strategy

What is the goal of this strategy ?

The aim is to **anticipate how a given software product will behave in a range of extreme conditions** in order to identify opportunities for improvement that would help prevent unintended consequences for stakeholders.

When to use it ?

Conduct this analysis at every stage of the project, including during initial design, before major updates, as the **user base grows**, when the **target audience changes**, and continuously to adapt to evolving **societal impacts** and **emerging concerns**.

Applying the strategy

Edge Case: In software development, it is a scenario that occurs at the **extreme ends or boundaries of operating conditions**, testing how the software behaves under unusual or rare circumstances.

This strategy encourages pushing considerations to the limits of software usage by considering 3 cases:

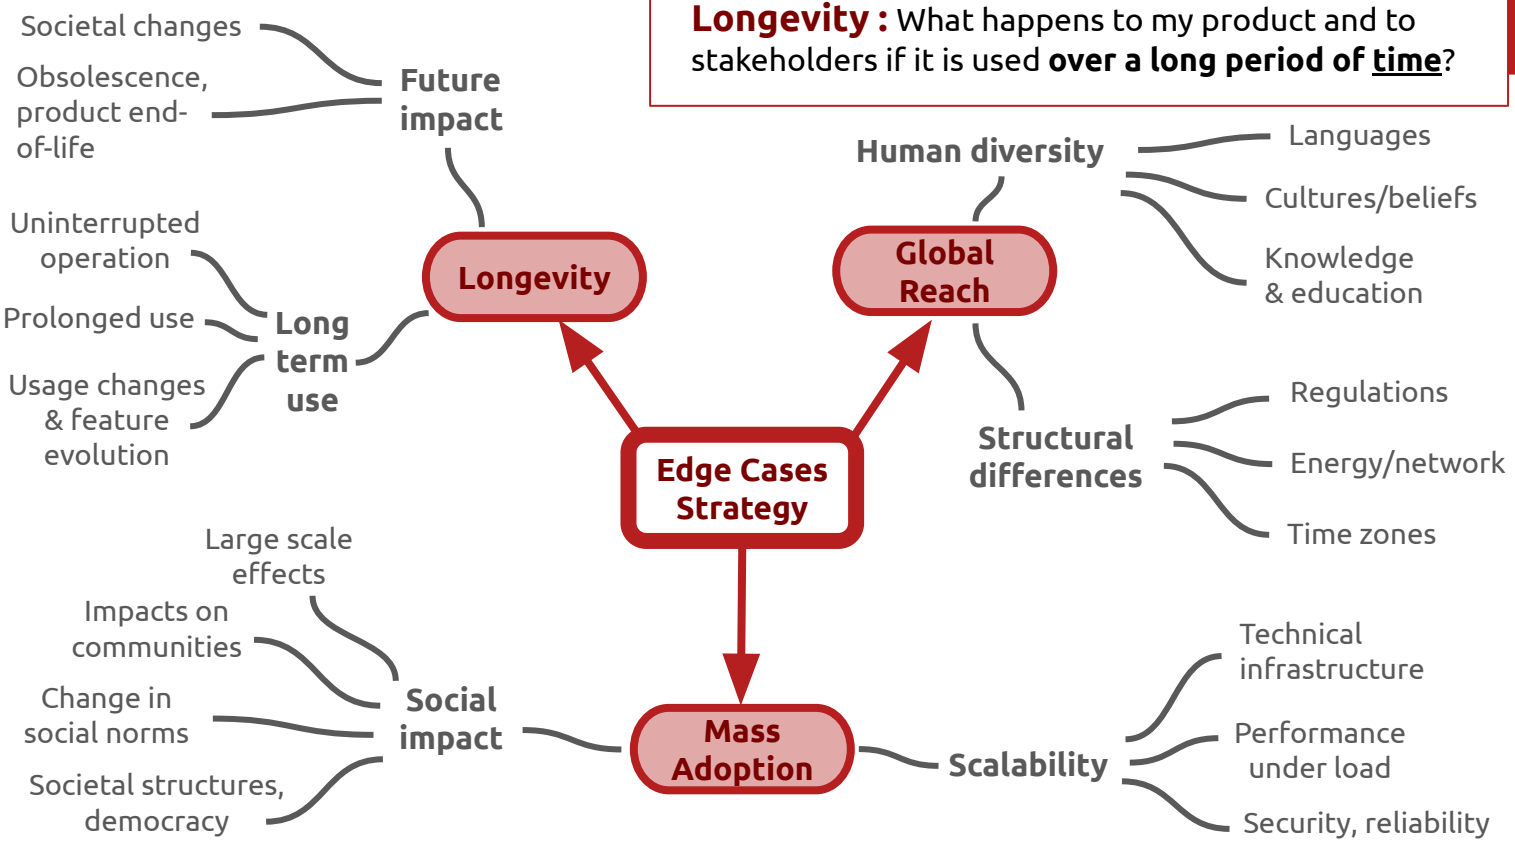

1. Global Reach
2. Mass Adoption
3. Longevity

Assessment questions

Global Reach : What happens to my product and to stakeholders if people from **different countries and backgrounds** start using it?

Mass Adoption : What happens to my product and to stakeholders if an unexpected **huge amount of people** start using it?

Longevity : What happens to my product and to stakeholders if it is used **over a long period of time**?

The ***Tarot Cards of Tech*** and the ***Envisioning Cards*** could be useful tools to apply this strategy
